

You wouldn't  
cook dinner  
in a trash can.

***But that's what you're doing  
when you burn trash in your  
campfire.***

- Burning plastic, cans, paper packaging, and food scraps emits toxic fumes and heavy metals like lead and mercury.
- These pollutants settle on the food you eat and contaminate the air you breathe.

Protect your family and the great outdoors.  
**Don't burn trash in your campfire.**

## Be a part of the solution.

- Use garbage cans or dumpsters.
- Recycle cans, glass, & plastic.
- Burn only wood in your campfire.
- **NEVER** burn plywood or treated or painted wood. Ash & smoke are toxic.
